INFORMATION MANAGEMENT TOOLS

BFC Consulting is always in constant search of the latest technology, methods and strategies which permits to translate the efforts of our clients on sustainable benefit, considered within the tools management, the analysis, availability, security, operation, use and development of information generated in various management models and different areas within an organization.

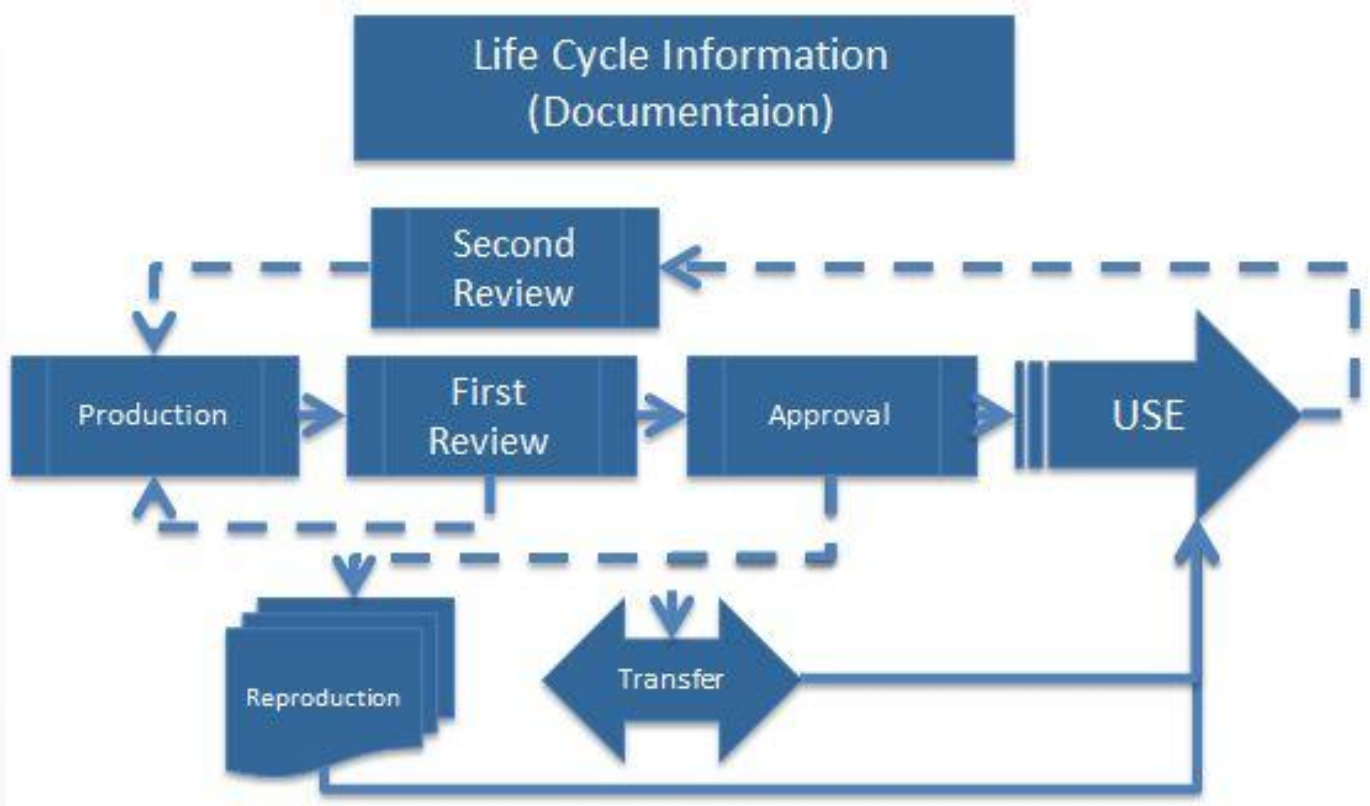

This methodology of valuing the exploitation of information is called "Business Intelligence", which allows institutions to efficiently exploit the information through the years is generating, and is not enough to just create, organize, store and use.

The present and future of information within institutions is translated into "Revenue for the Company."

HOW TO ACHIEVE BUSINESS INTELLIGENCE

BFC Consulting develops and implements models for the management systems of information flows, to the extent of the processes and activities of our customers, we achieve this through an initial analysis, monitoring the route which passes the whole process generation of information, identifying key points of positive and negative value generation, review and approval, we measured the time from the beginning to use, analyze bottleneck during generation and throughout the course of the process that generates, determine and recommend storage mechanisms, digital formats, operating methods and mechanisms for obtaining information value, likewise have the ability to recommend the infrastructure in Information Technology to bring more value to the entire process of generating revenue through information.
